

# UNIVERSITI PUTRA MALAYSIA

## FAKULTI SAINS KOMPUTER DAN TEKNOLOGI MAKLUMAT

Name: YUE CHENGHAO

Matric: 227154

The content shown in the screenshots may appear misaligned because my computer's default language is Chinese. I wasn't able to change CMD and Terminal to English in a short time. Therefore, after taking the screenshots, I used a translation tool to convert them into Chinese. I hope you can understand.

### LAB 1 – Individual

#### **OBJECTIVE:**

The main objective of this lab is to introduce the students to the Windows operating system. Students will also be introduced to the Command Prompt.

#### **DURATION:**

1 week / 3 hours

#### **DUE DATE OF SUBMISSION: WEEK 2**

Submit your assignment to your demonstrator. Make sure you sign the submission form after submitting.

#### **PROGRAMME OBJECTIVE (PO):**

PO2: Use the available software package with appropriate computer components.

#### **RUBRIC:**

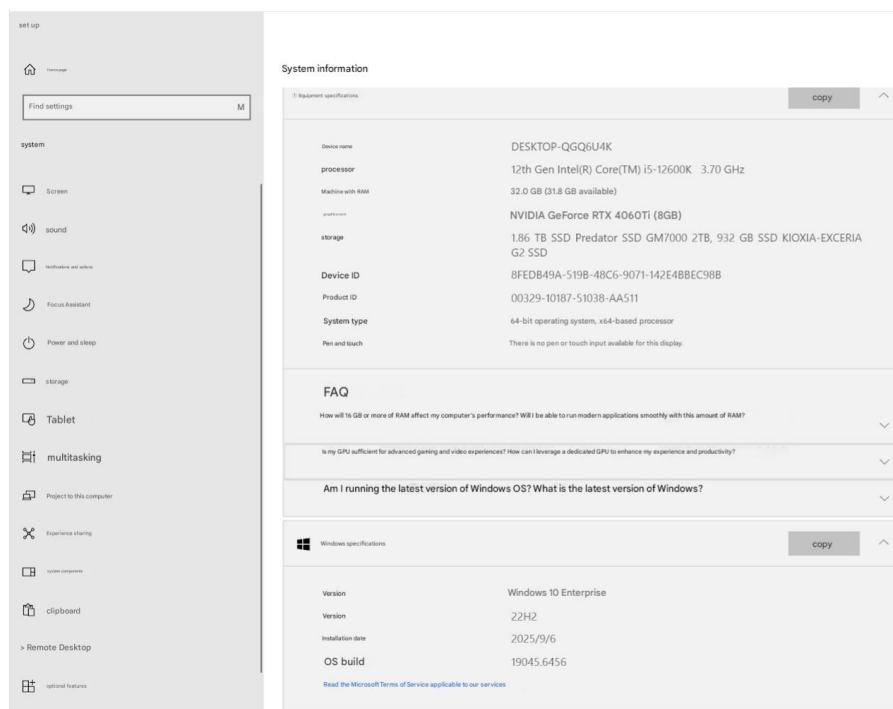

CRITERIA	LEVEL 1 Very Poor	LEVEL 2 Poor	LEVEL 3 Good	LEVEL 4 Very Good	LEVEL 5 Excellent
The ability to perform operating system (OS) tasks.	Unable to perform OS tasks or able to perform OS tasks with very limited success (< 40%).	Able to perform OS tasks with limited success ( $\geq 40\%$ , < 60%).	Able to perform OS tasks with some success ( $\geq 60\%$ , < 80%).	Able to perform OS tasks with considerable success ( $\geq 80\%$ , < 100%).	Able to perform OS tasks with outstanding success (100%).

#### **QUESTIONS:**

##### **Part A (Knowing about your computer)**

1. Answer the following questions about the computer that you are using in this lab.
  - a) What is the version of the Windows OS in use?

## Windows 10 Enterprise 10.0.19045 22H2

```
PS C:\Windows\system32> (Get-ComputerInfo).WindowsProductName, (Get-ComputerInfo).OsVersion
>> (Get-ItemProperty "HKLM:\SOFTWARE\Microsoft\Windows NT\CurrentVersion").DisplayVersion
>>
Windows 10 Enterprise
10.0.19045
22H2
```

b) What company manufactured the computer?

Colorful Technology And Development Co.,LTD

```
PS C:\Windows\system32> Get-CimInstance Win32_ComputerSystem | Select-Object Manufacturer, Model
>> # 主板信息 (台式机)
>> Get-CimInstance Win32_BaseBoard | Select-Object Manufacturer, Product
>>

Manufacturer                                Model
-----
Colorful Technology And Development Co.,LTD CVN B760I FROZEN WIFI D5
Colorful Technology And Development Co.,LTD
```

c) What is the speed of the processor and how much RAM (physical memory) is in the computer?

12th Gen Intel(R) Core(TM) i5-12600K      3700Mhz  
32G RAM    6400Mhz

```
PS C:\Windows\system32> Get-CimInstance Win32_Processor | Select-Object Name, MaxClockSpeed
>> # MaxClockSpeed 单位 MHz: 3700 == 3.7 GHz
>>
>> # 物理内存总量 (GB)
>> "(0:N1) GB" -f ((Get-CimInstance Win32_PhysicalMemory | Measure-Object -Property Capacity -Sum).Sum / 1GB)
>> # 内存总计 (插槽)
>> Get-CimInstance Win32_PhysicalMemory | Select-Object BankLabel, Manufacturer, Capacity

Name                                MaxClockSpeed
-----
12th Gen Intel(R) Core(TM) i5-12600K      3700
32.0 GB
```

- d) How much data can you store on the C: drive and how much of the C: drive is

in use?

```
PS C:\Windows\system32> Get-CimInstance Win32_LogicalDisk -Filter "DeviceID='C:'" |
>> Select-Object DeviceID, @{n='Size(GB)';e={[math]::Round($_.Size/1GB,2)}};
>> @{n='Free(GB)';e={[math]::Round($_.FreeSpace/1GB,2)}};
>> @{n='Used(GB)';e={[math]::Round((($_.Size-$_.FreeSpace)/1GB,2)}};
>> @{n='Used(%)';e={[math]::Round((($_.Size-$_.FreeSpace)/$_.Size*100,1)}}
>>

DeviceID : C:
Size(GB) : 217.41
Free(GB) : 81.18
Used(GB) : 136.23
Used(%) : 62.7
```

- e) What is the name of the antivirus program used in the computer (if any)?

### Windows Defender

```
PS C:\Windows\system32> Get-MpComputerStatus | Select-Object AMServiceEnabled, AntivirusEnabled, AntispywareEnabled, RealTimeProtectionEnabled
>>

AMServiceEnabled AntivirusEnabled AntispywareEnabled RealTimeProtectionEnabled
-----
True True True True

PS C:\Windows\system32> _
```

2. On the computer which you are working, perform and list down a hardware and software inventory of at least three hardware devices and three application programs on the computer. List the vendor and product.

### HARD DEVICES:

graphics card:	NVIDIA	Geforce RTX 4060ti
Solid-state drive:	KIOXIA	EXCERIA G2 SSD
Network Interface Card:	INTEL	AX211 WI-FI 6E

### APPLICATION

GOOLE	chrome web browser
MICROSOFT	VS Code IDE, word
JETBRAINS	IntelliJ IDE

```
PS C:\Windows\system32> Get-CimInstance Win32_VideoController | Select-Object Name, DriverVersion
>>

Name DriverVersion
-----
NVIDIA GeForce RTX 4060 Ti 32.0.15.8129

PS C:\Windows\system32> Get-CimInstance Win32_DiskDrive | Select-Object Model, InterfaceType, @{n='Size(GB)';e={[math]::Round($_.Size/1GB,0)}}
>>

Model InterfaceType Size(GB)
-----
KIOXIA-EXCERIA G2 SSD SCSI 932
Predator SSD GM7000 2TB SCSI 1908

PS C:\Windows\system32> Get-CimInstance Win32_NetworkAdapter -Filter "PhysicalAdapter=True AND NetEnabled=True" |
>> Select-Object Name, Speed
>>

Name Speed
-----
Intel(R) Wi-Fi 6E AX211 160MHz 535500000

PS C:\Windows\system32> _
```

> Google Chrome (15)	0.1%	1,645.8 ...	0.1 MB/秒	0 Mbps	0%	G
> IntelliJ IDEA Ultimate Edition ...	0.4%	524.6 MB	0.1 MB/秒	0 Mbps	0%	
> Microsoft Word (3)	0%	235.9 MB	0 MB/秒	0 Mbps	0%	G
> QQ (5)	0.1%	342.8 MB	0 MB/秒	0 Mbps	0%	
> Visual Studio Code (12)	1.6%	782.3 MB	0.4 MB/秒	0.1 Mbps	0%	G
> Windows PowerShell	0%	46.9 MB	0 MB/秒	0 Mbps	0%	,

## Part B (The Command Prompt)

### Objectives:

- use DOS commands to view, navigate, create and delete directories
- use DOS commands to copy, rename, and delete files

Microsoft's Disk Operating System (DOS), also called MS-DOS, is a collection of programs and commands used to control the overall computer operations system. All modern Windows versions support DOS commands from the command line.

### 1. Open a command line from Windows:

- Click the Start/Run button and type: *cmd* or *command*

1. What directory are you in? `C:\Users\zxYch>`

2. What does the prompt look like? `C:\Users\zxYch>`

### 2. Displaying Directory Contents: Dir

DIR command will list directories and various files. Directories are specified with the <DIR> notation that precedes the file/directory. The DIR command also displays the volume name, free space, and total files and directories present.

Show a list of the directories located on this drive.

- type: *cd\* change to the root directory
- type: *cd windows* change to the windows directory
- type *dir*

```

C:\Users\zxYch>cd\

C:\>cd windows

C:\Windows>dir
驱动器 C 中的卷是 系统
卷的序列号是 2E6C-0699

```

How many directories do you have in the windows folder?

77 \_\_\_\_\_

```
26 files          10,195,940 byte
77 directories    87,923,490,816 available bytes
```

What does the /p switch do? \_\_\_\_\_

The "/p" indicates pagination display (pausing at each screen, press any key to continue), to prevent long lists from flashing by in a flash.

### 3. The absolute path and relative path

The commands related with file and directory allows **two ways in specifying location** (for source or target), which are called the **relative path** and **absolute path**. A path is the direction from the current directory or other specific location to the intended file or directory (e.g. *c:\mydir\mysubdir\file.txt*).

When you only specify a source or target without the parent directory name (e.g. *file.txt*), the command will search the source/target in current directory. This is known as relative path. But you may specify source/target located outside the current directory by providing the absolute path (e.g. *c:\mydir\mysubdir\file.txt*).

Absolute path will allow you to specify to any source/target when you run a command from any location in the system/directory structure. There are also special sub directories named '.' and '..' provided in all directories.

- Find out the content of your current directory (use **DIR** command)  
Find out the content of the root/base directory e.g. c:\ (use **DIR** command)
- Type the following command -> **dir .**   
What is displayed on the screen? So what is the purpose of the dot ('.')?

What is displayed? : Same as dir (the current directory listing)  
Purpose of '.' : Represents the **current directory** in a path.

- Type the following command -> **dir ..**   
What is displayed on the screen? So what is the purpose of the dots ('..')?

What is displayed? : The contents of the **parent (upper-level) directory**.  
Purpose of ".." : Refers to the **parent directory** (one level above the current).

- What is the command to determine the existence of a file named 'file1.txt' in the current directory?

```
C:\Windows>if exist file1.txt (echo exists) else (echo does not exist)
does not exist
```

if exist file1.txt (echo exists) else (echo does not exist) in CMD

- What is the command to determine the existence of a file named 'file1.txt' in a directory named 'mydir' in the upper level (1 level) above of the current directory?

```
C:\Windows>if exist ..\mydir\file1.txt echo Found
```

if exist ..\mydir\file1.txt echo Found

#### 4. Create and change a directory

To create directories in DOS, use the **md directory\_name** or **mkdir directory\_name** command.

To change directories use the **cd directory\_name** command. To move up one level in the directory structure, use the command *cd...*

Create an **IT** directory in the C drive

- type: **cd** change to the root directory
- type: **md IT**

Verify the creation of the directory

- type: **dir**

Is the **IT** directory in the list? **yes**

```
C:\>md IT

C:\>LOST
'DOR' is not recognized as an internal or external command, nor as an operable
program or batch file.

C:\>DIR
The volume in drive C is the system
volume, and its serial number is 2E6C-0699.

Directory of C:\

2025/08/09  06:35    <YOUR>      inetpub
2025/11/06  20:40    <YOUR>      IT
2025/09/24  15:25    <YOUR>      mnt
2019/12/07  17:14    <YOUR>      PerfLogs
2025/11/06  15:10    <YOUR>      Program Files
2025/10/24  23:07    <YOUR>      Program Files (x86)
2025/09/11  21:12    <YOUR>      Python313
2025/09/06  21:41    <YOUR>      Users
2025/11/02  13:57    <YOUR>      Windows
                0 files
                0 bytes
                9 directories, 88,118,419,456 available bytes
```

How to change to the **IT** directory?

**CD IT**

```
C:\>CD IT

C:\IT>
```

#### 5. Managing Files: copy, ren, del

You can use the **copy** command to make a 2<sup>nd</sup> copy of a file, with a new name.

Save a file to IT directory (file name *lab2.doc*)

How to verify whether *lab2.doc* file is in the **IT** directory?

`dir lab2.doc`

```
C:\IT>echo hello> lab2.doc

C:\IT>dir lab2.doc
The volume in drive C is the system
The serial number of the volume is 2E6C-0699

Directory of C:\IT

2025/11/06  20:47                7 lab2.doc
              1 file                7 bytes
              0  Directory 88,075,423,744  available bytes

C:\IT>_
```

Make a backup of the *lab2.doc* file with other name *labTWO.doc*

- type: *copy lab2.doc labTWO.doc*
- type: *dir*

Are the new backup file and the original there? **YES**

```
C:\IT>dir
The volume in drive C is the system.
The volume serial number is 2E6C-0699

The directory C:\IT

2025/11/06  20:49    <YOUR>      .
2025/11/06  20:49    <YOUR>      ..
2025/11/06  20:47                7 lab2.doc
2025/11/06  20:47                7 labTWO.doc
              2 files                14 bytes
              2 88,085,872,640 directories  available bytes

C:\IT>_
```

To rename a file, you can use the **ren** command.

Rename *lab2.doc* to *lab.doc*

- type: *ren labTWO.doc lab.doc*
- type: *dir*

Did the file renamed? *yes*

```
C:\IT>ren labTWO.doc lab.doc

C:\IT>dir
The volume in drive C is the system
volume, serial number 2E6C-0699.

The directory C:\IT

2025/11/06  20:50    <YOUR>          .
2025/11/06  20:50    <YOUR>          ..
2025/11/06  20:47                7 lab.doc
2025/11/06  20:47                7 lab2.doc
                2 files                14 bytes
                2 directories 88,085,020,672 available bytes

C:\IT>
```

Delete files in DOS by using the **del** command.

Delete *lab.doc* file

- type: *del labTWO.doc*

Is the file has been deleted? *NO*

Why? *There isn't a file named labTWO, We have changed it into lab2*

## 6. Delete a directory

To delete a directory in DOS, use the **rd directory\_name** or **rmdir directory\_name** command.

Delete the IT directory

- type: *rd it*

Is the folder deleted? *NO*

Why? *The folder IT is not empty/ or we are now still in the path of IT*

```

C:\IT>rd The IT
system cannot find the specified file.

C:\IT>cd ..

The C:\>rd IT
directory is not empty.

C:\>rmdir IT /s IT,
Confirm (Y/N)?y

C:\>dir
The volume in drive C is the system
volume, serial number 2E6C-0699.

Directory of C:\

2025/08/09  06:35    <YOUR>      inetpub
2025/09/24  15:25    <YOUR>      mnt
2019/12/07  17:14    <YOUR>      PerfLogs
2025/11/06  15:10    <YOUR>      Program Files
2025/10/24  23:07    <YOUR>      Program Files (x86)
2025/09/11  21:12    <YOUR>      Python313
2025/09/06  21:41    <YOUR>      Users
2025/11/02  13:57    <YOUR>      Windows
                0 files                0 bytes
                8 directories, 86,062,874,624 available bytes

C:\>

```

If your directories can't be deleted, try this command:

- type `cd\` to change to the `c:\` drive
- type: ***rmdir IT /s***
- type Y to confirm the removal of the `it` directory and all its subdirectories

Verify directory removal

- type: ***dir***

Is the directory still exists? **NO**

Questions end. However students are encouraged to search and practice other commands that are provided by the command prompt shell to have more exposure to the shell.
